

## Kit of wheels and screws for Rack 19" 4 wheels and 16 screws

Kit consisting of 4 wheels and 16 screws for assembly in a 19" Rack, designed to facilitate its movement. The use of wheels makes it easier to move the rack, which is especially advantageous in large cabinets that can reach very high weights. The floor-standing rack feet can be replaced with this kit, increasing the maximum load capacity from 600 kg to 960 kg.

Alternatively, it is possible to combine feet and wheels on the same rack, thus benefiting from both configurations. This solution allows floor unevenness to be corrected using the feet, providing stability on irregular surfaces, while the wheels enable easy movement when retracted. It also improves load distribution by adding more support points. This option offers the performance of a fixed rack without sacrificing mobility. In configurations with both wheels and feet, the maximum load depends on factors such as foot height adjustment, weight distribution across support points, and floor levelling.

Two of the supplied wheels contain brakes to avoid the involuntary movement of the Rack.

## Highlights

---

- Installation space optimization: more usable space is gained by being able to move the rack
- Ease of work: the wheels allow the rack to be rotated in any direction to facilitate access to connections and devices
- High load capacity: allows compatible racks to reach a maximum load of up to 960 kg, exceeding the capacity achieved with feet installation
- Compatibility with feet: possibility of combined installation with feet depending on environmental requirements
- Safety system: brakes are included to ensure that the cabinet remains in place, avoiding possible accidents
- Easy installation: fixed at the base of the rack using screws, without additional modifications required
- Installation screws for 19" rack mounting are included
- Installation compatibility: available for floor-standing racks with 600, 800 and 1000 mm depth
