

PMS integration gateway license per room (for Middleware Business server and ArantiaCast)

Annual license allowing the integration of the PMS (Property Management System) into Arantia TV and ArantiaCast services via a gateway (ref. 830508). It enables the delivery of multiple services that enhance the user experience and streamline property management, such as automatic language switching adapted to the guest, billing for purchases made through Arantia TV, or clearing guest data from the TV upon checkout.

This license is valid for one year and can subsequently be extended for yearly periods to ensure service continuity. One license per room is required, and it is compatible with Middleware Business and ArantiaCast servers.

Service availability is subject to change and depends on PMS support and its level of integration. You can contact our team for the current list of compatible PMS and services.

Ref.	830509
Logical ref.	AL-PMS-CHAR
EAN13	8424450206508

Packaging info

Unit	1 pcs.

Highlights

- Client check-in: When a new client registers on the PMS, the PMS sends Arantia TV the associated guest data, such as name or language
- Moving guest (room change): When a guest changes rooms, the PMS sends Arantia TV the register required to move all the guest information from the previous room to the new one
- Guest change (guest's information modification: name, language...): If any piece of the guest's information changes, the PMS updates Arantia TV with the changes
- Easy publishing (client buys a service): When a guest buys a service using Arantia TV, the system sends the data associated with the operation to the PMS for the information to be included in the guest's bill
- Bill request (the guest requests a bill that is displayed on the television screen): the guest selects "Expenses" on Arantia TV to check his/her bill. Arantia TV sends the PMS the associated register to request the guest's expenses for that room, and the PMS sends the expense information back to Arantia TV to be displayed on the screen
- Text messages: The reception staff sends the final user a message via the PMS system interface. The PMS sends the message data to the Arantia TV system so the user can be informed. The user will be able to access the message at any time from the "Messages" menu
- Checkout: When a client leaves the hotel, the PMS sends Arantia TV the payment register and all the information associated with that guest is removed from the system
- Express checkout: The guest has the option to check out from their own room via the "Express checkout" menu. In this case, Arantia TV sends the PMS a request, which answers back whether the guest can do an express checkout or not (if there are any pending charges, for instance). The answer will display on the screen on whether the checkout was actually carried out or the guest still needs to visit the reception desk
- The integration with the PMS also includes other needed features, such as database synchronization
- Compatible with ArantiaCast professional casting system
- Compatible with Arantia TV service (requires Middleware Business server)
